Market Release Note

MRN-TECOMPLUS-2.0.3

Product number:	TecomPlus
Product description:	TecomPlus mobile app
Product version:	V2.0.3
Affected parts:	n/a
Release date:	26 March 2020

New features

- TCP/IP support for local WLAN connections
- Panels are now secured by default with PIN authorisation when entering or editing a panel. We've also added an option to remember the PIN so that you can access your devices faster
- Auto sync allows you to automatically perform a sync whenever you enter a panel (option may be enabled per-panel)
- Input testing functionality
- Relay testing functionality

Improvements

- History form now uses a tabbed view for Alarm or Access events
- History form now lets you select a date range to filter the history events
- When creating a panel for the first time, the app will automatically perform a sync with your panel
- We've added a confirmation pop-up when you have unsaved changes and navigate away from the panel setup, or when trying to delete a panel
- Device icons will now dynamically indicate what a user does and does not have access to. Devices that a user does not have access to will be greyed out
- Panels may now be deleted easier from the panel list screen
- DGP 16 (Challenger panel) now displays in DGP list

Resolved Issues

- Doors on TS0866 now display correctly
- Resolved issue where icons would sometimes display in smaller size when resuming from standby on Android devices
- Resolved text display issues on devices with smaller displays
- Resolved issue where Sync commands would sometimes not be actioned in certain conditions
- Various graphical display issues have been cleaned up
